Course Overview

The one day training course covers the use of all three Pi Company products. During the training, the participants are equipped with the necessary skills to administer, interpret and provide feedback on the Reflector Big Five Personality; Reflector 360; and the Connector Ability.

Reflector Big Five personality is a modern online personality questionnaire, focusing on behaviour that people show in work situations. This assessment provides a comprehensive overview of how an employee scores on the five most important personality traits on which people differ, as well as a number of aspects underlying these five traits.

Reflector 360 is an assessment tool that employees can use to gather information about their behaviour in the workplace, whereby information is gathered from an array of sources within the workplace.

Connector Ability is a unique cognitive ability test that measures the G factor, the general intelligence factor. Connector Ability is unique because the test is free from cultural bias and is adaptive, thus the level of each questions depends on the answer to the previous question.

The various applications for each product are also covered and each participant is given the opportunity to practice his or her interpretation and feedback skills on the Reflector Big Five Personality assessment. Please note that during the one day training, the development and statistical properties of the instruments are NOT covered in detail.
